

December 22, 2022

Dear Parents/Guardians:

We have results of our water quality testing and have discovered that the new source will have a high sodium content similar to that of the current well. We are currently exploring engineering solutions to provide reverse osmosis water fountains in the school. The hope is to eliminate the need for drinking water delivery.

As previously shared, the test drill site is viable and we will be establishing the well in that location. This week, the well liner was installed. Contractors will be taking one week off for Christmas and are scheduled to be back on site the first week of January to begin connecting the new well to the school. This will include horizontal boring to the building and adding new pressure tanks. We hope to be fully connected by the end of January.

I wish you all a restful break and a 2023 filled with health and happiness.

Sincerely,

Belal Taha
Superintendent of Education
